Professional Work Experience

- **Amazon Web Services** **Toronto, ON, Canada**
Software Dev Engineer II (Java, AWS, Typescript) *Jan 2025 - Present*
 - **AWS Marketplace:** Working on payment processing and the sub-ledger database for AWS Marketplace, ensuring accurate transaction recording, and reconciliation, and developing scalable financial reporting, compliance, and system reliability solutions.
- **Amazon** **Vancouver, BC, Canada**
Software Dev Engineer II (Java, AWS, Typescript) *Nov 2023 - Jan 2025*
 - **Ordering (Retail):** Worked in the Ordering PAPA (Pay Anywhere Pay Anytime) team, which powers payment services for all Amazon Retail Orders, ensuring seamless transactions for customers while continuously enhancing the payment service architecture.
 - **Data Migration Tool:** Developed a high-performance tool to migrate petabytes of historical Ordering data between databases, enabling concurrent migration at high transactions per second to accelerate the process.
- **ResMed** **Halifax, NS, Canada**
Software Engineer (NodeJS, Typescript, AWS) *Jan 2023 - Nov 2023*
 - **External Portal:** Developed the External Portal, a centralized service for organizational APIs, enabling real-time testing, providing API documentation, and streamlining API consumption for ResMed stakeholders.
 - **Developer Portal:** Developed the Internal Developer Portal using Backstage to streamline the management of microservices, libraries, pipelines, and automated documentation.

- **IBI Group** **Hyderabad, Telangana, India**
Software Developer (Django, Java, AWS, React) *July 2018 - July 2021*
 - Worked as a Software Developer on the following projects
 - **ITMS : Intelligent Integrated Traffic Management System**
 - Developed ITMS, a platform providing city-specific services like CCTV cameras and Virtual Machine Boards, currently deployed in Hyderabad and Toronto.
 - **Multitenant Application:** Developed a multi-tenant SaaS application leveraging AWS infrastructure for scalability and efficiency.
 - **Performance Improvements:** Optimized APIs using an in-house GraphQL-like application, reducing the application's performance load by 30
 - **Migration of Legacy Application:** Worked on migrating the legacy ITMS application, improving backend architecture and application performance.
 - **CurblQ :**
 - CurblQ is a platform that helps cities optimize curbside spaces by visualizing and managing curbside regulations, improving the productivity of underutilized spaces.
 - **Architecture Design :** Contributed to the architecture design of a multitenant, multilingual distributed system.
 - **Map Algorithms:** Developed custom map algorithms for specific use cases, such as retrieving the nearest curbsides on roads using APIs on large datasets, and filtering curbsides in a specific area using PostgreSQL procedures.
 - **Integrating Map API's Services:** Integrated various map APIs, including DeckGL and KeplerGL, for data analysis and visualization of large datasets.

Academic Qualifications

- **Dalhousie University** **Halifax, NS, Canada**
Masters of Applied Computer Science, Grade: 4.00/4.30 *Sep 2, 2021 - Dec 23, 2022*
- **CVR College of Engineering (JNTUH)** **Hyderabad, Telangana, India**
B.Tech, Computer Science and Engineering, Aggregate: 82.4% *Sep 2014 - May 2018*

Skills

- **Programming Languages:** Python3, Java
- **Full Stack Technologies:** HTML5, CSS3, Javascript, React, NodeJS, SpringBoot, Django
- **Databases:** MySQL, PostgreSQL, AWS DynamoDB
- **DevOps:** AWS, Docker
